

ANY BIN. ANY GRAIN. ANYTIME.

Simple, Dependable Grain Bin Level Monitoring!

Grain Gauge level monitor is a proven and cost effective method to accurately monitor the levels of material in your bin. As the material in your bin reaches the Grain Gauge Level device, it pushes against the activator, turning the color from black to green - even glowing in the dark at night for clear visibility. When the material unloads it will return to black.

You can install multiple level monitor devices along the bin wall at key levels. Simply let the gauge do the work for you - no more climbing and risking your safety.

Features & Benefits:

- Easy installation
- Clear visibility - Glows-in-the-dark
- Two times larger than other brands
- No electricity required
- Maintenance free
- Cost effective

ANY BIN. ANY GRAIN. ANYTIME.

Place Grain Gauge at key levels on bin. As the grain reaches the desired level the gauge will activate

Grain Gauge shown from back

Grain Gauge glows -in-the-dark when activated.
