

Implement Switch Module

The implement switch module can be installed at any position on the data line. If it is the last item on the data line the termination cap should be installed on the open connector.

The Implement switch has a magnetic base which allows it to be positioned on the implement as needed. The coiled spring actuator will activate when moved in any direction.

There is a three-pin Metri-Pak connector for connecting an implement switch. The switch is connected between pins A & C. When the switch is closed the audible alarm is on. When the switch is open the audible alarm is muted and HOLD is displayed. The display still shows blockage and error indications when HOLD is displayed.

+ 12 VDC on pin A = Audible alarm ON
