The primary failure point on Hypro, Ace and other centrifugal pumps is the housing, impeller and seal when used with Roundup and/or Ammonium Sulfate. These products are very aggressive and create erosion in the pump housing. Significant pump wear/failure occurs at the four points where the body is tapped for vent ports. Existing pumps can be serviced by using the following which will fit Hypro pumps on commercial sprayers. Standard seals and impellers are listed. Polypropylene impellers for acid base products.
